

Rider's Triangle

- Rider: Focus on the rider's skill level, experience, and physical condition.
- Motorcycle: Evaluate the bike's design, weight, power, and handling characteristics.
- Road: Assess road conditions, surface quality, and environmental factors.
- Interaction: Recognize how the rider's inputs affect the motorcycle's performance on the road.
- Safety: Prioritize safety gear and awareness of surroundings to enhance riding experience.
- Balance: Maintain a balance between rider ability, motorcycle capabilities, and road conditions for optimal control.
